## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1 thru 76 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term “substantially” in claims 1-76 is a relative term whose metes and bounds are not adequately defined by the applicant’s disclosure. The term “substantially” is not defined in the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 1 thru 76 are rejected under 35 U.S.C. 102(e) as being anticipated by Sumiyoshi et al. ‘134A. Sumiyoshi discloses (see figures 1 and 2) an electro-optical device comprising a substrate 101; a thin film transistor comprising a polysilicon semiconductor layer (source, drain, and channel regions); gate insulation film 105,

Art Unit: 2815

insulation film 107, contacts (conductive film) 108, 109, insulation flattening film (organic resin film) 110, and display electrode (pixel electrode) 111.

It was inherent that the polysilicon semiconductor layer exhibits a peak of Raman spectra, displaced from a peak of single crystalline silicon to the lower frequency direction since less crystalline structures have a more disorganized structure and therefore a lower peak than single crystalline silicon. Also, see *Prior Art* paragraph below.

#### ***Prior Art***

5. The prior art of made of record and not relied upon is considered pertinent to applicant's disclosure. See, for example, Iijima et al. '308 (see, for example, FIG. 7) where it shows how a Raman peak of a less crystalline material keeps shifting towards a lower frequency direction, due to the material's more disorganized structure.

#### ***Response to Arguments***

6. Applicant's arguments with respect to claims 1-76 have been considered but are moot in view of the new ground(s) of rejection.

A semiconductor layer having "substantially" no grain boundaries still has grain boundaries. Therefore, the polysilicon film of Sumiyoshi still reads on the applicant's claims.

#### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2815

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
